🌟 Overview

TaoFi (Subnet 10 on Bittensor) is the financial layer for decentralized AI. It connects Bittensor's 128 AI subnets to Base (with Ethereum and Solana integrations coming), enabling swaps, liquidity, staking, and yield in a single click with MetaMask.

What TaoFi Offers

- **128 AI Companies in One Click**

TaoFi provides direct exposure to all 128 Bittensor AI subnets ("AI companies"). Each subnet token represents a specialized AI service (e.g., language models, recommendation engines). Users can instantly swap into these tokens without bridges or wrapped assets.

- **1-Click Swaps via MetaMask**

TaoFi integrates directly with Base and Bittensor EVM. A user can:

- Connect wallet on Base
- Swap ETH/USDC/USDT into subnet tokens
- Trade back to TAO or USDC — all trustless, non-custodial, and gas-efficient.

- **Liquidity Provision (Triple-Digit APR)**

TaoFi deployed Uniswap V3 on Bittensor EVM. The TAO<>USDC pool allows:

- Permissionless trading of TAO
 - LPs to set custom ranges (functioning as limit orders)
 - Fees (0.3%) going 100% to LPs
 - Early adopters reporting *triple-digit APRs* in liquidity rewards.
-

Additional Revenue Opportunity : Referral System

Generate your referral link on the TaoFi app [here](#) and place it in your video description.

Please point viewers to use your link to discover TaoFi swap. This will generate you 100% of the swap fees from any users you refer.

Unique Advantages vs Competitors

- **No Bridges / No Wrapped Assets**

Many cross-chain DeFi apps rely on wrapped tokens. TaoFi avoids this — swaps always use canonical liquidity pools.

- **Agent-Native Design**

Most DeFi apps are human-oriented. TaoFi is built for both human users *and* Web3 AI agents, enabling programmatic trading and yield strategies.

- **Backed by Leading Investors**

Strategic round led by DCG, Pantera, taostats, and Lyrik gives TaoFi credibility and resources.

- **Base + Bittensor Liquidity**

Combines Bittensor's AI innovation with Base's deep liquidity. Competitors typically silo liquidity.

- **Aligned with TAO**

All trading feeds liquidity back into the TAO ecosystem, reinforcing Bittensor's growth flywheel.

Vision

Bittensor is the largest crypto-AI ecosystem, with 128 specialized AI subnets. TaoFi's goal:

- Become the **Internet Capital Market for AI**
 - Enable trading, lending, yield, and derivatives on AI-native assets
 - Democratize access to the AI revolution for any user with MetaMask
 - Capture value from all subnet economic activity, catalyzing a multi-billion-dollar AI DeFi sector
-

Roadmap

- **Q3 2025**
 - Ethereum mainnet support
 - TAO lending on Bittensor EVM
 - **Q4 2025**
 - Solana integration
 - Subnet perpetuals (via Hyperliquid, HIP-3)
 - **2026**
 - AI-agent-native DeFi tools (bots, on-chain AI trading strategies)
-

How to Use TaoFi (Step-by-Step)

1. Go to the TaoFi App - [link](#)
2. Connect Wallet (MetaMask on Base)
3. Swap ETH/USDC → Subnet Token (e.g., Chute)
4. Bridge: Cross-chain (e.g., 100 USDC Base → 100 USDC Bittensor EVM)
5. Swap Again (e.g., 100 USDC → TAO)
6. LP in TAO<>USDC Pool (show rewards dashboard + APR)

Tip: Bridge at least 100 USDC → auto-receive 0.01 TAO for gas.

Step by step guide: [link](#)

👉 Please demonstrate Taofi in use if you are able to do so in your video

Tokenomics / Fees

- Swaps: 0.3% fee (entirely to LPs)
 - Liquidity incentives: Triple-digit APR reported
 - Staking: TAO → sTAO (liquid staking, accrues yield over time)
